A DIVISION OF *Thompson Ramo Wooldridge Inc.*

8433 FALLBROOK AVENUE • CANOGA PARK, CALIFORNIA • TRIANGLE 3-3210 • DIAMOND 6-6030

9 March 1961

Mr. R. M. Amory  
Central Intelligence Agency  
Washington, D.C.

Dear Mr. Amory:

The development activity which you and a number of your people reviewed in the form of the Subsystem I System Design Inspection at our Denver plant 30 April 1959 has now neared completion and is ready for demonstration. As you will recall, it is an Air Force sponsored program to develop a data processing system to exploit the reconnaissance outputs from SAMOS Satellites.

We are proud of our efforts and feel that the individual equipments and the system that they combine provide a major step forward in the fields of elint and photographic processing, interpretation, display, storage and retrieval and man/machine relationships.

A series of 3-day demonstrations will be held in the Ramo-Wooldridge Division laboratories at Canoga Park, California, 4 April and will be repeated again on 11 April. These will consist of a number of descriptive briefings and hardware demonstrations wherein the equipments will accomplish all the significant functional tasks in an operational mode which should be of extreme interest to your organization.

I would be delighted to have you and your people attend. Mr. Thomas Blount is in charge of all arrangements for accommodations and transportation, and if your representatives will forward the names, dates of attendance and the requirements of each, they will be handled at this end. Lt. Col. W. Wood of the Air Force's Command and Control Development Division at Hanscom Air Force Base, Massachusetts, is responsible for the tests and it is requested that an information copy of the security clearance for each member be forwarded to him as well as to our Security Officer (Mr. R. Evans) at Canoga Park.

I hope you will be able to attend the demonstrations and review the results of our work.

Cordially yours,
